

LIFETIME FINISH

In order to achieve a decorative lifetime finish that protects the product against all elements and surpasses ASTM-B-117 salt spray standards of over 1000 hours, you must select the right coating. PBB and its team of engineers are working in a new field of metal coating called PVD (physical vapor deposition). Applied is a light metallic layer that is grown on the base metal giving the product several characteristics such as high corrosion resistance, no attack by UV radiation, high wear resistance and no discoloration or tarnish. PBB will guarantee its product for a lifetime when ordered with the PVD coat for an additional cost.
